

Vaccine Contracts and the EU Commissioner's Secret

EU President Ursula von der Leyen is part of a giant Covid-19 scientific fraud and propaganda campaign that has led to human rights abuses and is a threat to democracy in Europe - say freedom-loving EU ministers.

- Contracts between the vaccine industry and the EU and many other countries remain secret. Nobody knows what the vaccine contracts contain, they are totally blacked out. What are the authorities hiding? When will we know what is in these contracts?

Some freedom-loving ministers from the European Parliament presented a press conference in October 2021, THE MESSAGE: "YOUR RIGHTS ARE IN DANGER", their presentation was about the misuse of the green certificate/vaccine passport. MEPs demanded the immediate resignation of European Commission President Ursula von der Leyen. They said Ursula von der Leyen is part of a gigantic Covid-19 scientific fraud and propaganda campaign that has caused human rights violations and is a threat to democracy in Europe. This and her conflicts of interest should lead to her resignation.

Points mentioned:

1. PRIVATE NEGOTIATIONS WITH PFIZER -

Ursula von der Leyen was involved in private negotiations with the Pfizer chairman before signing an agreement with a private company. And she refuses to be transparent about this.

2. SECRET VACCINE CONTRACTS -

The same transparency principle has been violated because parts of the Pfizer contract have been redacted. Von der Leyen has acted as chief consultant for Pfizer in these vaccine contracts, which is neither good governance nor science.

3. VACCINES AS THE ONLY SOLUTION -

Furthermore, she has advocated vaccines as the only way out of the pandemic, which is a lie. There are other treatments, as many doctors have testified.

4. CENSORSHIP OF SCIENTIFIC DEBATE -

Von der Leyen has also participated since 2020 in the censorship of scientific debate on social media.

5. CONFLICT OF INTEREST -

She faces yet another conflict of interest related to her husband's work with 2 biopharmaceutical companies lobbying for market share for their products. She also does the same for vaccines.

Here's a speech from July 6, 2022, by one of the freedom-loving MEPs, Cristian Terheş, of the Christian Democratic National Peasant Party. He studied theology and became a priest, he also studied journalism and worked as a business analyst. He was involved in Romanian politics and was particularly known for his opposition to corruption.

Ursula von der Leyen's attitude fits the description of corruption: Power without accountability

Corruption is power without accountability, said an anticorruption expert from Slovenia.

The attitude of the European Commission led by Ursula von der Leyen clearly fits this description of corruption.

Billions of doses of vaccines were bought by Ursula von der Leyen's Commission based on contracts that were not fully disclosed even to the members of the European Parliament who should check on how she is spending people's money.

These doses must have cost tens of billions of euros, but we don't know for sure because the contracts are not published.

If this is not corruption, then what is?

Ursula von der Leyen is lecturing the EU member states on rule of law, but it is her the first one who is not transparent with her activities not with how she is spending people's money.

I demand therefore that, if Ursula von der Leyen really believes in transparency, to fully publish the contracts she had signed with the vaccine companies so we will know all how much these vaccines have cost."

China approves Genuine Biotech's HIV drug for COVID patients

BEIJING, July 25 (Reuters) - China on Monday gave conditional approval to domestic firm Genuine Biotech's Azvudine pill to treat certain adult patients with COVID-19, adding another oral treatment option against the coronavirus.

The availability of effective COVID vaccines and treatments is crucial in laying the groundwork for China's potential pivoting from its "dynamic COVID zero" policy, which aims to eliminate every outbreak - however small - and relies on mass testing and strict quarantining.

The Azvudine tablet, which China approved in July last year to treat certain HIV-1 virus infections, has been given a conditional green light to treat adult patients with "normal type" COVID, the National Medical Products Administration said in a statement.

"Normal type" COVID is a term China uses to refer to coronavirus infections where there are signs of pneumonia, but the patients haven't reached a severe stage.

China in February allowed the use of Pfizer's oral treatment Paxlovid in adults with mild-to-moderate COVID and high risk of progressing to a severe condition. In 2020, it approved the use of Lianhuaqingwen capsules, a traditional Chinese medicine-style formula, to alleviate symptoms of COVID such as fever and cough. [LINK](#)
