

The credit card that tracks your CO2 emissions

Remember when this was called a conspiracy theory?

by 'Peter Imanuelsen, Jul 27, LINK

Imagine that you are at the grocery store checkout after seeking out a fine steak for dinner. You reach for your credit card to pay, but to your surprise the purchase gets denied.

It turns out that you have exceeded your monthly CO2 limit and you are not allowed to buy this steak. You have no option but to put the juicy steak back and grab a bag of bug snacks.

Does this sound far fetched to you? Well it shouldn't.

Because in Sweden there is now a credit card that tracks the CO2 emissions from all your purchases, and if you exceed your CO2 limit, the card will block you from any further purchases.

Yes, you read that correctly. A credit card that tracks your CO2 emissions. It is here right now

The card is called DO Black and has been developed by the Swedish company Doconomy in

collaboration with Mastercard who are actually part-owners in the company.

"DO Black not only helps users track and measure CO2 emissions associated with their purchases, but also puts a limit to the climate impact of their spending."

So now we have a credit cards that stops people from buying things, not based on how much money they have, but how much carbon emissions their purchases have contributed to.

"We all need to come to terms with the urgency of the situation and rapidly move towards more responsible consumption. With DO Black there is no more excuses. Through our collaboration with UNFCCC and Mastercard, DO will enable people to do their part to contribute to the carbon reduction goals of 2030 and onwards" says Nathalie Green, CEO at Doconomy.

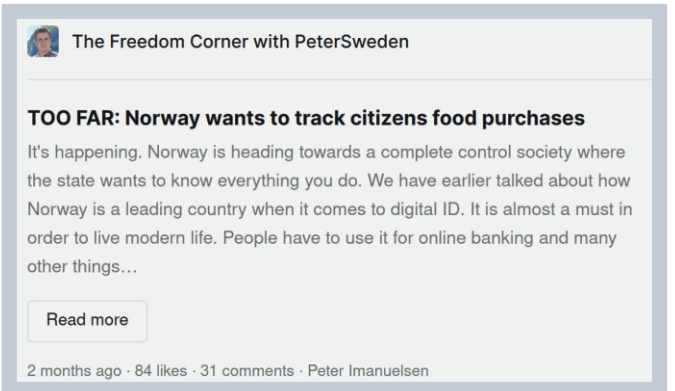

And of course the UN is onboard with this as the UN Climate Change Secretariat (UNFCCC) say they are pleased to "welcome this initiative".

Look at what Erik Gutwasser, head of Nordics and Baltics and Mastercard has to say about this.

"For a more sustainable way of life, radical changes are required" he said.

So far this credit card is voluntary. But how long until it becomes mandated by governments that all credit cards track your CO2 emissions? Probably not very long...

In Norway the state has already announced that they want to track the food purchases of all citizens, so it is not a big leap to think they might want to do something similar with your carbon emissions.

Of course this card is from Sweden. The same country that is pushing the cashless society and where some 6000 people have implanted microchips into their hands to use for payments. Some even uploaded their covid passports onto it so they could just scan their hands to show their covid status...

You can read more about that in my previous article here:

We will probably see some form of climate change passport in the future (linked to your digital ID of course). Here all your CO2 emissions can be tracked and if you exceed your limits, perhaps you get negative points on your social credit score.

If you told someone 10 years ago that there would be a credit card that tracked and blocked you if you exceeded your CO2 limit, you would be called a crazy conspiracy theorist. That would never happen they would say! Now it is happening.

And by the way, digital ID is not a conspiracy theory. It has already been in Scandinavia for many years. In Norway you more or less need to have it to live modern life. It is used for online banking, buying stuff with your credit card online and much more. It will not surprise me if digital ID somehow is involved in some future CO2 tracking.

You can read more about how digital ID works in Scandinavia in my previous Substack article here:

And guess who else seem very happy about this credit card...? None other than the World Economic Forum!

Not only does Doconomy have this CO2 tracking credit card, they also launched a service to help brands calculate the carbon footprints of their products. It's called the 2030 calculator. Wait a minute, there is that "2030" thing again.

You will ride the bike and eat the bugs, meanwhile the elite will be flying their private jets and dining on the finest meat. And you will be happy.

The Great Reset is just another word for Global Communism. Climate change is just an excuse to implement a total control society. It's Climate Communism.
