

Five “Climate Change” Smoking Guns – Reasons Why “Manmade Climate Change” is a Lie

Since the COVID-19 scam has been revealed as the prelude to the Great Reset, many people now realize the extent to which science has been corrupted to serve the interest of politicians. This includes climate “science”.

You’ve probably already guessed that the earth is not heating up. But you may not know these facts, any one of which would totally disprove the false global warming hypothesis (unproven theory). Here are five. And this is just the tip of the iceberg.

1. CLIMATEGATE.

In 2009 1,079 emails between climate scientists at the University of East Anglia’s Climatic Research Unit (CRU) in the United Kingdom and others working with them, were leaked. This small group of scientists had been the most influential in driving the worldwide alarm over global warming. Their emails proved that they were engaged in unethical practices, such as tampering with data and keeping scientists who disagreed with them out of the peer review system.

These leaked email documents revealed discussions between these men about how they could manipulate data to get rid of the Medieval Warm Period, which extended from about 950 AD to 1250 AD. They revealed that this group also considered tactics to prevent the release of the data on which the IPCC’s conclusions were based: data requested by other scientists under Freedom of Information (FOI) laws. In Britain, failure to release FOI-requested data is a criminal offense. Phil Jones, head of the Climate Research Unit, claimed to have lost large chunks of this data.

Two years later, in 2011, 5000 more emails were leaked, in what is now called Climategate II. These were even more startling and incriminating than the 1,079 released in 2009. Myron Ebell commented, “If there were any doubts remaining after reading the first Climategate emails, the new batch of emails that appeared on the web today [Nov. 22] make it clear that the UN Intergovernmental Panel on Climate Change is an organized conspiracy dedicated to tricking the world into believing that global warming is a crisis that requires a drastic response.”

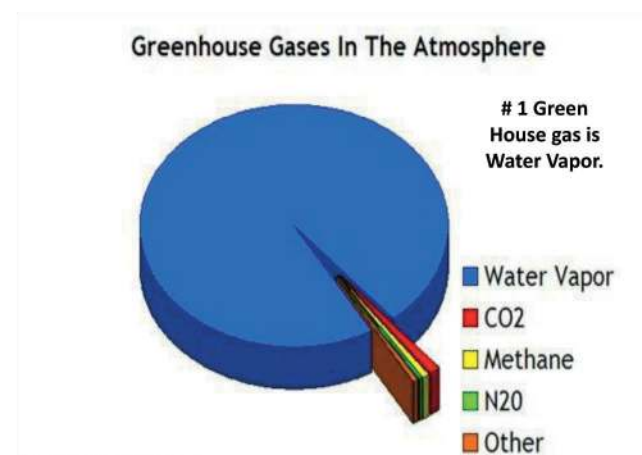

This, in itself, should have been the end of the global warming fiasco. Unfortunately, it was all covered up.

2. CARBON DIOXIDE IS INCORRECTLY DEPICTED AS THE MAIN “GREENHOUSE GAS”

This totally incorrect graph is shown to our children:

The graph should actually look like this:

This graph shows the correct percentage of water vapor, over 95% of all greenhouse gases, compared with carbon dioxide, methane and nitrous oxide. The climate change alarmists chose carbon dioxide as the culprit, because it is produced when we burn gasoline and natural gas. Thus, they could blame humanity for the “warming”.

3. FALSE PREDICTIONS

None of the many predictions by climate alarmists, starting in the 1970s have come true. In contrast, astronomy - a real science - is able to predict solar and lunar eclipses to the second.

In the decade of the 1970s the media hammered us with thousands of articles saying that we were heading for an ice age. Then, when the climate started to warm in the 1980s, they suddenly reversed this story, stating that the earth is warming. You can read about the many false predictions in the book, *The Green New Deal and Climate Change: What You Need to Know*, available on Amazon.
